

## EQUIPMENT

# Power Supply (Overall) Preventative Maintenance

### *Preventive Maintenance*

- Clean device clean. Avoid using water to do so.
- Store in a dry place with no possibility of contact with water.
- Store within the range of -40-55°C
- If device is not used frequently, unplug from wall input to prevent possibilities of voltage spikes. Regulators often malfunction after high voltage inputs, and keeping it unplugged reduces the risk.
